## **Water Treatment Plant and Environmental Remediation**

## **project summary**

### **Project Summary for Work to be Completed by the Ministry of Sustainable Resource Management**

The Ministry of Sustainable Resource Management is responsible for ensuring that Britannia's environmental issue is dealt with. Their project managers are Golder Associates who, along with many other consulting companies, have mostly completed their research and assessments. Many components have begun to be put into place and action plans have been developed. The feasibility study for the high-density water treatment plant was finalized in December 2002. An addendum was issued in February 2003. The study is based on a plant being sited at the 4150 level of the bench to the east of Britannia Beach. Access to the plant would be by a road passing in part through the existing community, and then a new section of road to the north and east of the community. The bridge over Britannia Creek is to be replaced.

The following consultants have been responsible for aspects of Britannia's remediation:

SRK – Mining and Hydrogeology

URS – Contaminated Sites Investigations and Alluvial Fan

AMEC – Water Treatment Plant

Water Management Consultants – Flood Consultants
